M11RZ seed 42: learned team<->zone bias and zone-token attention (EXPLORATORY, descriptive; d/r from the team centre to the zone circle centre / radius)
(a) vs current-zone d/r (next-zone input at its median)
(b) vs next-zone d/r (current-zone input at its median)
(c) zone-token attention vs next-zone membership
block 1 (L0)
block 2 (L1)
one cohort (n=12)
mean over cohorts (other inputs at medians)
mean over cohorts, partial dependence
team<->zone logit bias, mean over heads and blocks
attention lift on the zone token (1 = uniform)
d / r (1 = zone boundary)
inside next zone
outside next zone
10^0
